### **Diving regulator**

A diving regulator is a pressure regulator that reduces pressurized breathing gas to ambient pressure and delivers it to the diver. The gas may be air or one of a variety of specially blended breathing gases. The gas may be supplied from a scuba cylinder carried by the diver or via a hose from a compressor or high-pressure storage cylinders at the surface in surface-supplied diving.

### **BAUER Compressors**

Oil and Gas Compression Systems Our systems are specifically engineered and designed for rigorous duty under harsh operating conditions. Solutions include: High pressure air and nitrogen generation/booster systems for rig tensioning & motion compensation, BOP accumulator charging, nitrogen blanketing, coiled tubing, instrument air, and seismic applications.

### **Scuba diving**

Scuba diving is a mode of underwater diving where the diver uses a self-contained underwater breathing apparatus (scuba), which is completely independent of surface supply, to breathe underwater. Scuba divers carry their own source of breathing gas, usually compressed air, allowing them greater independence and freedom of movement than surface-supplied divers, and longer underwater endurance ...
