Water?Soluble Polymer Applications in Foods | Wiley Online ...

Interest in the science and technology of water-soluble polymers is rapidly increasing and this book provides a much-needed and up-to-date overview. Chapters review important new food applications, giving short historical overviews, the latest information on uses and possible future applications.

Water

The tissue with reduced soluble solids, minerals and pigments can still be utilized in other food applications (for baking, filling, etc.), whereas the ground tissue obtained using the more ...

Water

Water-soluble polymers are commonly used for many traditional applications in the food industry. This comprehensive book covers the more nonconventional, novel food and biotechnological applications. Water-Soluble Polymer Applications in Foods presents a comprehensive and theoretical approach to hydrocolloids as adhesives, special gum coatings ...

Water-Soluble Polymer Applications in Foods HPC, a non-ionic cellulose ether, is soluble in water below 40 C and in polar organic solvents (Butler & Klug, 1980). CMC is an acid-hydrolyzed, pure a-cellulose material which has thickening and water-absorptive properties and is used in frozen and dairy food products.

Water-Soluble Polymer Applications in Foods Description. Water-soluble polymers or hydrocolloids are widely used in many fields, including food, agriculture, ceramics, paper and ink technology, explosives and the textile industry. Table of Contents. The Wiley Advantage. Reviews.

Water Soluble Polymers Market Size | Industry Report, 2022

Application Insights. Water soluble polymers find applications in various sectors including water treatment, oil & gas, personal care & detergents, food, pulp & paper, pharmaceuticals and others including construction, mining, paints, explosives, agriculture, adhesives and textiles. Water treatment was the largest application segment in 2014...

Food applications—another major end use for water-soluble polymers—are dominated by natural water-soluble polymers, including casein, gelatin, xanthan gum, guar gum, carrageenan, and pectin. Some of these polymers provide physiological benefits (as dietary fibers, they help reduce cholesterol levels) as well as functional attributes.
